

GRUPO GNOVIA

Professional architectural glass restoration

CORPORATE BROCHURE 2026 · CONSTRUCTION SECTOR

We restore installed glass. We protect your handover.

We recover glass that has been scratched, burned by welding spatter, damaged by grinder sparks or stained on site — in place and without removal — before it turns into a costly replacement.

155

documented projects

28,119

m² of glass restored

19

Mexican states

18+

years of experience in Mexico

WHO WE ARE

Specialists in recovering architectural glass damaged during construction

Grupo GNOVIA is a Mexican company specialized in the **professional restoration of architectural glass**. With more than 18 years of experience in Mexico, headquarters in Mexico City and a presence in Colombia since 2019, we support builders, developers, construction managers, façade and glazing contractors, supervision firms and after-sales teams.

We work on **installed, intact** glass — tempered, laminated, annealed and insulated — on façades, partitions, railings, skylights, windows and interior glazing. Our goal is to keep construction damage from turning into open punch-list items, handover delays or unnecessary replacements.

"Before replacing the glass, confirm whether you really need a new one."

On-site restoration, with the glass installed

WHO WE SUPPORT

Project directors and Project Managers

Release areas without compromising budget or schedule.

Construction managers, superintendents and site engineers

Close supervision observations and punch lists caused by damaged glass.

Façade and glazing contractors

Correct glass that is already installed without removing panels.

After-sales teams and developers

Address owner claims without triggering replacements.

Supervision, project management and procurement

Have a technical, quantifiable alternative before replacing.

Nationwide coverage

Based in Mexico City, projects in 19 states and a presence in Colombia.

THE CHALLENGE AT PROJECT CLOSE-OUT

Every flagged pane still pending delays the handover

In the final stage, scratches, welding burns, grinder spatter, cement or iridescence turn into supervision observations and open work fronts. If replacement is the only way out, it triggers a cycle of manufacturing, logistics, removal and reinstallation.

01

Handover delays

Manufacturing and reinstalling means weeks of waiting and coordination across several trades.

02

Unnecessary cost

Large, special or already-installed façade panels drive up the cost of replacement.

03

Operational risk

Removing glass can damage frames, seals and finishes that were already complete.

04

Perceived quality

A marked pane undermines the presentation to the client, owner or investor.

THE GNOVIA ALTERNATIVE

Restore on site before replacing

We assess which panes can be recovered in place and turn observations into panes, square meters, work fronts and access requirements, without disrupting the construction schedule.

up to

70%

potential savings versus replacement

EXECUTIVE BENEFITS

Savings versus replacement

No manufacturing, transport, removal or installation of new panels.

Faster close-out

No waiting for supply; helps keep the handover on pace.

No removal

We work on the installed glass, protecting frames, seals and finishes.

Punch lists closed

Work by fronts, levels or released zones, with progress control.

More efficient after-sales

Resolves claims without unnecessary replacements.

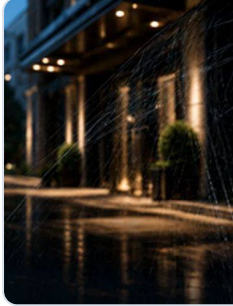

Sustainability

Less glass waste and transport; the existing material is preserved.

SERVICES

Six construction-site damages we repair with the glass in place

We service façades, partitions, railings, skylights, windows, interior glazing and storefronts. The service applies to intact tempered, laminated, annealed or insulated glass.

Scratched glass

Surface or deep scratches from abrasive cleaning, tools, dragged debris or site handling. We restore clarity and visual uniformity, including on tempered glass.

Welding burns

Molten metal particles that bond to the glass and leave pits or craters. The surface is restored without replacing the panel.

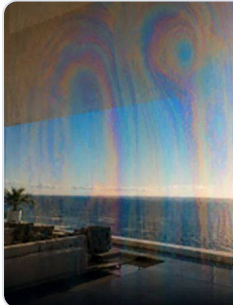

Grinding sparks

Spots, pitting and localized haze from cutting or grinding near installed glass.

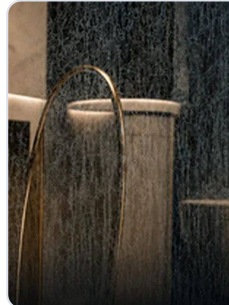

Cement and construction residue

Splashes of cement, mortar, concrete or grout. We distinguish adhesion from surface damage before intervening.

Iridescence

Rainbow-like stains that are not dirt. We identify the cause before any replacement decision.

Limescale and mineral stains

White marks, calcium, efflorescence or haze from hard water, irrigation or runoff. We recover transparency.

Important

We do not service broken, cracked, fractured or structurally damaged glass. The depth of the damage determines the working time; it does not force a replacement.

HOW WE WORK

A technical, documented process coordinated with the site

1

Diagnosis and protection

We identify glass type, damage, depth, extent, proximity to edges, access, height and finishes. We protect the work area.

2

Controlled technical opening

When the damage requires it, the surface is worked gradually to avoid optical distortion.

3

Damage restoration

The work is adapted to each damage type: scratches, welding, grinder, cement, iridescence or limescale.

4

Clarity recovery

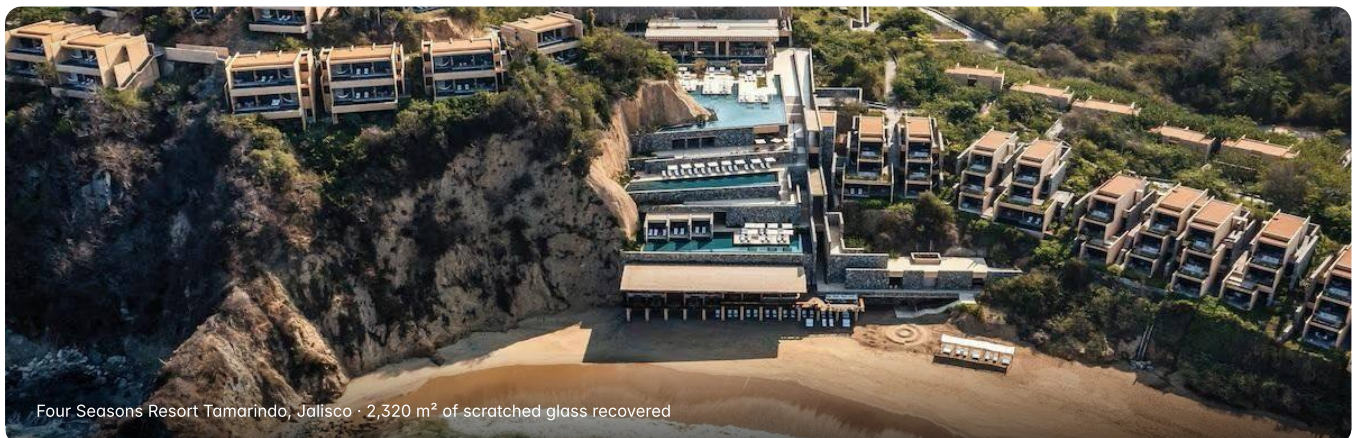

We verify uniformity, reflection and transparency under real light, from the angles that matter to the project.

ON-SITE COORDINATION

- Coordination with the developer, builder, supervision, glazing contractor and site safety.
- Work by fronts, levels or released zones.
- Work at ground level, on scaffolding or electric suspended platforms, depending on access and site permits.
- Scope documentation and progress control.
- Service confirmed remotely; on-site visit for large-volume projects.

QUOTATION AND REFERENCE TIMES

Quotation basis	Per m ² , minimum 1 m ² per treated pane
Scratched glass	≈ 3 hours per m ²
Welding or grinder damage	≈ 5 hours per m ²
Price factors	Damage type and depth, surface area, quantity, access, height, location and volume
Outside Mexico City	Yes; logistics and travel expenses depending on location and volume
Initial information	Damage type, quantity or area, location and access

Four Seasons Resort Tamarindo, Jalisco · 2,320 m² of scratched glass recovered

EXPERIENCE IN FIGURES

Source: projects published by Grupo GNOVIA on LinkedIn (October 2026). Square meters include only projects with a reported area; at Citibanamex branches, 1 m² is counted per restored pane. 94 projects in Mexico City and the State of Mexico, 61 in other states.

FEATURED PROJECTS

Façades, towers and large-scale developments

4,230 m²

Hacienda Beach Club & Residences, Los Cabos, B.C.S.

Baja California Sur · May 2020 – Jul 2020

Restoration of 4,230 m² of tempered glass affected by scratches.

PROJECT FOR Hill International

980 m²

Be Grand Reforma, Floors 10-19, Mexico City

Mexico City · Nov 2022 – Feb 2023

Repair of 980 m² of tempered glass affected by scratches.

PROJECT FOR The Beck Group / Grupo Sordo Noriega (Visorno) / Be Grand

955 m²

Rubén Darío 225, Mexico City

Mexico City · Jan 2020 – Jun 2022

Restoration of 955 m² of insulated glass affected by scratches, welding burns and glass-cutter damage.

PROJECT FOR Abilia / JLL

880 m²

Insurgentes 700, Mexico City

Mexico City · 2020 – 2021

Restoration of 880 m² of tempered glass affected by scratches on the façade, performed with suspended platforms.

PROJECT FOR Irkon Holdings / Grupo Sordo Noriega (Visorno)

780 m²

Palacio del Mar, Torre Marbella, Rosarito, Baja California

Baja California · Jul 2024 – Sep 2024

Restoration of 780 m² of tempered glass affected by scratches.

PROJECT FOR Mexdesa

659 m²

Paseo Pitahaya, Zibatá, Querétaro

Querétaro · Jul 2023 – Apr 2024

Restoration of 659 m² of glass affected by scratches.

PROJECT FOR Arpada

FEATURED PROJECTS

Corporate, retail, infrastructure and institutional

634 m²

West 2, Santa Catarina

Nuevo León · May 2025 – Sep 2025

Repair of 634 m² of tempered glass affected by scratches on the façade.

PROJECT FOR Nest Desarrollo Inmobiliario / Kubreglass

107 m²

Mítikah Complex, Mexico City

Mexico City · Jan 2021 – Mar 2021

Restoration of 107 m² of tempered, laminated glass affected by scratches on the skylight dome.

PROJECT FOR Grupo Sordo Noriega (Visorno)

443 m²

Torre Scotiabank, Mexico City

Mexico City · Jul 2023 – Jul 2024

Repair of 443 m² of glass affected by welding burns.

PROJECT FOR Constructora Gia / Tecgruo / Acris

100 m²

Estadio GNP Seguros (formerly Foro Sol), Mexico City

Mexico City · Jun 2025 – Jul 2025

Repair of 100 m² of tempered glass affected by welding burns on the façade.

PROJECT FOR Grupo Casala

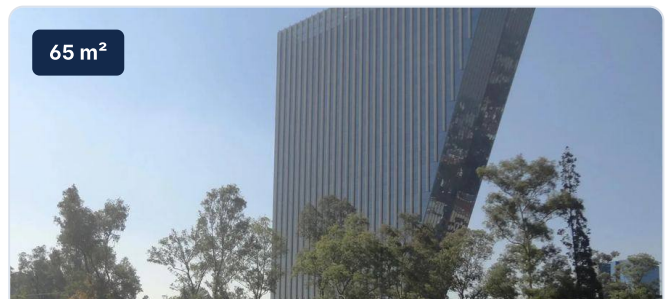

507 m²

Universidad Panamericana, Ciudad UP, State of Mexico

State of Mexico · Jan 2021 – Apr 2021

Restoration of 507 m² of tempered glass affected by scratches.

PROJECT FOR Aluvisa / CBRE

65 m²

Torre Virreyes, Mexico City

Mexico City · Jan 2017

Recovery of 65 m² of tempered glass affected by scratches.

PROJECT FOR T4 Construcciones
